EXPERIENCE

IEnergy Digital — *Software Engineer*

Jul 2025 – Present

- Automated Flutter Android/iOS releases with **GitHub Actions**, **Docker**, and **Fastlane**, cutting build-and-release time from 50 to 12 minutes (a **76%** reduction).
- Architected an AWS **DevSecOps** platform with **Terraform** (7 modules, 30+ resources), **Ansible**, and a kubeadm-based **Kubernetes** cluster, hosting 8+ services.
- Built **Jenkins** DevSecOps pipelines integrating **SonarQube** quality gates, **Trivy** image scanning, and **Kubernetes** deployments, cutting deployment time from ~40 to ~6 minutes (an **85%** reduction).
- Administered **EC2** instances in private subnets through **AWS Systems Manager (SSM)**, eliminating public IPs and direct SSH access to reduce the infrastructure attack surface.

WhatBytes — *Software Engineer Intern*

Feb 2025 – May 2025

- Optimized **Flutter** rendering and refactored a monolithic codebase into **Clean Architecture**, raising frame rate from **40 to 54 FPS (35% improvement)**.

ADM Education and Welfare Society — *Software Engineering Intern*

Sep 2024 – Jan 2025

- Developed **2** native Android apps on a **modular architecture** for an NGO ambulance-dispatch platform, integrating live tracking via **SSE**, **OpenStreetMap**, and **Firebase Auth**.

PROJECTS

Scopify | [GitHub](#)

Personal Project | NestJS, PostgreSQL, Redis, Docker, Kubernetes

- Built a containerized backend with **NestJS**, **PostgreSQL**, and **Redis**, packaged via **multi-stage Docker builds** for reproducible deployments.
- Deployed to a self-managed **Kubernetes** cluster using **StatefulSets**, **Ingress**, **ConfigMaps**, and **Secrets** for stateful data and configuration isolation.
- Shipped updates through an automated **Jenkins** pipeline publishing images to **GHCR**, replacing manual build-and-deploy steps end to end.

Self-Hosted Platform & Observability Stack | [GitHub](#)

Personal Project — Self-Hosted, Actively Operated | Docker Compose, NGINX, Cloudflare, Prometheus, Grafana, Loki

- Built a self-hosted platform with **Docker Compose**, **NGINX**, and **Cloudflare Tunnel**, serving traffic over **TLS** with zero public inbound ports.
- Implemented observability using **Prometheus**, **Grafana**, **Loki**, and **cAdvisor**, centralizing container metrics and log data across all services.
- Operated the stack continuously, handling container upgrades, TLS renewals, and outage recovery via **Grafana** dashboards and **Loki** queries.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (VPC, EC2, IAM, NAT Gateway, S3, SSM, VPC Endpoints), Linux Administration.

IaC & Configuration Management: Terraform, Ansible, Helm.

Containers & Orchestration: Docker, Docker Compose, Kubernetes (kubeadm, Deployments, StatefulSets, Ingress).

CI/CD & DevSecOps: Jenkins, GitHub Actions, GHCR, SonarQube, Trivy, Git, Argo CD.

Observability & Networking: Prometheus, Grafana, Loki, NGINX, Cloudflare, Tailscale, DNS.

Languages: Bash, Python, TypeScript, SQL, YAML, HCL.

EDUCATION

Maharaja Surajmal Institute

2022 – 2025

Bachelor of Computer Applications (BCA) — CGPA: 9.4/10

Ranked in the top 10 of the graduating class.
